Marirose,
Dan Mallett, New Indy, provided me the flow rate of 800 gallons/minute during a call I had with him about the steam stripper, on May 3, 2021 at 9:30 am.

Marirose,

During the onsite inspection the flow rate from the foul condensate tank to the ASB was 720 gallons/minute. I believe the 750-800 gallon/minute information was communicated verbally.

Hi Denis,

For the administrative record, where did we learn of the 750-800 gpm number? Did New Indy give it to us in writing anywhere or was it just verbally communicated?

Now the mill is sending about 750-800 gallons/minute directly to the ASB (little less than double).

Using a 12 month average prior from May 2019-May 2020, the average flow to the stripper was 430 gpm and the flow to the ASB through the hardpipe was 90 gpm.

External E-Mail - Caution - This email originated outside of New-Indy. .

Dan,

I hope you are having a good day. I had a follow up question about our conversation we had on Monday morning. It is my understanding and correct me if I am wrong, that prior to September 2020, all the foul condensate was collected in the steam stripper feed tank (foul condensate tank). From the steam stripper feed tank about 400 gallons/minute was sent to the steam stripper. What was the flow rate from the foul condensate tank to the aeration stabilization basin prior to September 2020?

Let me know if you have any questions.

Thanks,

Denis
